

DELTA

Where does a company traveler add the SkyMiles for Business ID on their personal SkyMiles account?

You can add your business ID to your personal SkyMiles account by logging in and visiting the SkyMiles tab in the top navigation bar - Manage My Account - My Profile - Other Loyalty Programs. Scroll down to Business Loyalty Program. If you are already enrolled in Delta's Business Travel Hub then your business travel is already automatically tracked.

What is the difference between the SkyMiles for Business program and the personal SkyMiles® Program?

SkyMiles for Business is Delta's travel rewards program in which companies can earn miles for employee business travel on Delta and eligible partner flights, which the company may redeem for travel rewards. SkyMiles is Delta's frequent flyer program in which individual travelers can earn miles for flying on Delta or eligible partner flights and for using SkyMiles partners' products and services.

Although program administrators are required to have a SkyMiles account, SkyMiles for Business travelers are not required to be SkyMiles members. When traveling for company business, employees who are SkyMiles members will still accrue their personal miles while their company also earns miles in the company account. To ensure both the individual traveler and company earn credit in both programs, be sure the employee's SkyMiles number and the company's SkyMiles for Business account number are added to the reservation at the time of ticketing.
